KrishiCash

AI-Powered Cash Flow & Risk Oracle
for Rural Micro-enterprises

Team KrishiCash | Theme: AI for Rural Finance

The Core Problem

- **87M+** rural households lack access to formal credit
- **No CIBIL scores** — traditional lenders can't assess risk
- Lenders face **surprise NPAs** from hyper-local risks
 - Drought, crop failure, local market price crashes

▮ **₹1.2 lakh crore** lost annually to rural NPAs

Our Solution

KrishiCash is a B2B AI platform that replaces guesswork with data — using satellite imagery, weather forecasts, and market prices to predict cash flows before a loan is approved.

- ⚡ **Fast** — Real-time API decisions
- 🌍 **Inclusive** — No formal credit history needed
- 🔍 **Explainable** — Every score has a reason

How It Works

Data Signal	Source	Insight
 Satellite NDVI	Google Earth Engine	Crop health & yield
 Rainfall Forecast	IMD / OpenWeather	Climate risk
 Commodity Price	eNAM / Agmarknet	Market risk
 Soil Moisture	ISRO Bhuvan	Ground stress
 Repayment History	MFI internal data	Behaviour risk

Business Model

- **Customers:** MFIs, Regional Rural Banks, NBFCs
- **Revenue:** ₹15–₹50 per risk assessment (B2B SaaS)
- **ROI for lenders:** Reduce NPAs by **15–20%**
- **Social impact:** 5M+ new rural borrowers reached

Roadmap

- **Phase 1 — Now:** Prototype dashboard + scoring model
- **Phase 2 — 6 months:** Live pilot with a regional MFI
- **Phase 3 — Year 1+:** Multi-state rollout & crop insurance

Thank You

Ready to revolutionize rural finance.
