

KrishiCash

AI-Powered Cash Flow & Risk Oracle for Rural Micro-enterprises

Team: Team KrishiCash

NABARD Hackathon @ GFF 2026

The Core Problem

- **The Credit Gap:** 87M+ rural households lack access to formal credit.
- **Data Blindspots:** Traditional financial institutions cannot assess risk without CIBIL scores or formal financial histories.
- **The Result:**
 - High rejection rates for capable, honest borrowers.
 - Unexpected loan defaults (NPAs) due to unforeseen hyper-local risks like droughts or commodity price crashes.

Our Solution: KrishiCash

A **B2B predictive risk assessment platform** designed for MFIs, Regional Rural Banks, and NBFCs.

By synthesizing alternative, hyper-local data with basic transaction records, KrishiCash accurately forecasts future cash flows and generates dynamic risk scores.

- **Fast:** Real-time API-driven decisions.
- **Inclusive:** Requires zero traditional credit history.
- **Explainable:** Transparent AI that tells loan officers exactly *why* a risk is flagged.

Technology & Architecture

KrishiCash leverages modern AI and open data layers:

- **Alternative Data Feeds:**
 - 🛰️ Satellite NDVI (Google Earth Engine) for crop health.
 - 🌧️ OpenWeather/IMD for localized climate risk.
 - 📊 eNAM/Agmarknet for live commodity pricing.
- **AI Inference Layer:** XGBoost & PyTorch time-series models for cash flow forecasting.
- **Application Layer:** FastAPI backend serving a React.js dashboard for loan officers.

Business Model & Impact

- **Target Customers:** Microfinance Institutions (MFIs), Regional Rural Banks.
- **Revenue Model:** B2B SaaS / Pay-per-API-call (₹15–₹50 per assessment).
- **Value Proposition:**
 - Reduces NPAs by an estimated **15-20%**.
 - Safely expands the eligible borrower base by utilizing alternative data.
- **Social Impact:** Democratizes access to capital, empowering rural entrepreneurs and stabilizing agricultural supply chains.

Future Roadmap

- **Phase 1 (Now - GFF 2026):** Prototype cash flow prediction model on historical open data with live dashboard.
- **Phase 2 (6 Months):** Live pilot integration with a regional MFI for real-world validation on 1,000+ borrowers.
- **Phase 3 (Year 1+):** Multi-state rollout and expansion into automated crop insurance payouts based on the same satellite intelligence.

Thank You
